

MISNIVO

Complete Development Roadmap
Frontend se Real Money tak — August 2026

ABHI KAHAN HO

Live: daremarket.pages.dev — Cloudflare Pages pe auto-deploy

Stack: HTML/CSS/vanilla JS (no build) + Firebase (Auth, Firestore) + Cloudinary (video)

Ho chuka: 3 agreement gates + audit trail, keyword safety filter, 2-stage AI safety check (Gemini), thumbnail system, feed/shorts, comments

Users: abhi 0 asli users — nakli wallet paisa

Model: Mode A only — creator pehle taker chunta hai, phir kaam hota hai

YEH ROADMAP KAISE PADHNA

5 phases hain. Har phase ka apna maqsad hai — **order mat todna.**

Phase 1-2 mein **asli paisa nahi** aayega. Woh Phase 4 mein hai.

Har phase ke saath: kya banana hai, kaunsa tool, kitna kharcha, kitna time.

Time estimates solo dev ke liye hain (part-time, low-end laptop). Poora din de sako to aadha lag sakta hai.

Roadmap — Ek Nazar Mein

Phase	Maqsad	Time	Kharcha	Paisa?
1. Secure & Complete	Frontend poora + security + legal pages	3-5 hafte	Rs. 0	Nakli
2. Test with Users	20-50 asli users, bugs pakdo, admin panel	4-8 hafte	Rs. 0	Nakli
3. Backend & Legal	Cloud Functions, company, vakeel, KYC	4-6 hafte	Rs. 15-30k	Nakli
4. Real Money	Razorpay escrow, chhoti amounts se shuru	3-4 hafte	Rs. 5-10k	ASLI
5. Scale	Growth, compliance, moderation	Chalta rahega	Revenue se	ASLI

SABSE ZAROORI NIYAM

Asli paisa Phase 4 se pehle NAHI. Har phase ek zaroori parat hai. Phase 3 (Cloud Functions + vakeel + company) ke bina asli paisa = tumhari personal zimmedaari, aur koi bhi wallet balance badal sakta hai.

Phase 2 skip mat karna. Bina asli users ke test kiye launch karoge to asli paise ke saath bugs milenge — sabse mehngi galti.

PHASE 1 — Secure & Complete (abhi)

Maqsad: App पूरी तरह काम करे, सुरक्षित हो, और legally zaroori pages मौजूद हों. Sab kuch free tools पे.

1A. Security (sabse pehle)

FIRESTORE SECURITY RULES — SABSE ZAROORI

Abhi shayad rules khule hain (allow read, write: if true). Iska matlab **koi bhi banda browser se seedha tumhara database badal sakta hai** — apna wallet balance, doosron ka data, kuch bhi.

Check: Firebase Console → Firestore Database → Rules tab

Zaroori principles:

- users: sab padh sakein, sirf apna likh sakein
- **wallet: client se likhna BILKUL band** (sirf server badle)
- dares/proofs: create authed users, update/delete sirf owner
- agreements: sirf create — update/delete KABHI nahi (audit trail)
- safety_blocks, manual_review: sirf create, client se read nahi
- reports: sirf create

Note: abhi wallet client-side hai, isliye pura fix Phase 3 (Cloud Functions) mein hoga. Par rules abhi lagao — jitna ho sake band karo.

PHASE 1A — Security	Done
Firestore Security Rules likho aur test karo (Rules Playground use karo)	☐
Cloudinary upload preset check karo — unsigned hai to size/format limits lagao	☐
Firebase Authorized domains mein daremarket.pages.dev add karo	☐
Purane test accounts saaf karo	☐

1B. Legal & Safety (jo baaki hai)

PHASE 1B — Legal	Done
18+ age gate signup पे (DOB poocho, store karo)	☐
Private chat hatao — mission पे public comments rakho	☐
Terms of Service page	☐
Privacy Policy page	☐
Community Guidelines page (banned mission list yahan bhi likho)	☐
Grievance Officer ka naam + email footer mein	☐
About / Contact page	☐
Footer mein sab links	☐

1C. Product Polish

PHASE 1C — Frontend	Done
Logo aur theme finalize karo (Mission Strike demos se chuno)	[]
Favicon + app icon (16/32/56/192/512px)	[]
Mobile pe har screen test karo — chhoti screen, slow net	[]
Loading states har jagah (spinner, skeleton)	[]
Error messages saaf hon — 'Something went wrong' nahi	[]
Empty states (koi mission nahi, koi notification nahi)	[]
Share button har mission aur video pe (yeh tumhara marketing hai)	[]
Report button har mission, video aur comment pe	[]
404 page	[]

PHASE 2 — Test with Real Users (nakli paisa)

Maqsad: 20-50 asli log app use karein, nakli paise ke saath. Bugs milenge, aur pata chalega log kya karte hain jo tumne socha hi nahi tha.

Yeh phase skip mat karna. Asli users hamesha kuch aise karte hain jo developer ne nahi socha. Woh galtiyaan **nakli paise ke saath** milna hazaar guna sasta hai.

PHASE 2 — Tools banao	Done
Admin panel: user ban/unban, mission delete, proof delete	☐
Admin panel: report queue (kya report hua, action lo)	☐
Admin panel: manual_review queue (jahan do AI aapas mein bhide)	☐
Admin panel: basic stats (kitne users, missions, proofs)	☐
Notification system poora test karo	☐
Feedback button app mein — log seedha bata sakein kya toota	☐

PHASE 2 — Users laao (free)	Done
Khud 10-15 missions post karo, taaki app khali na dikhe	☐
Dost, college, gaming Discord/Telegram groups — 20-30 log	☐
Har complete mission ka video Instagram Reels + YouTube Shorts pe daalo	☐
Watermark laga ke (Misnivo ka logo) — free distribution	☐
Feedback lo: kya samajh nahi aaya? kahan atke?	☐

KYA DEKHNA HAI IS PHASE MEIN

Kitne log signup karke **actually mission accept** karte hain? (agar 10% se kam, to onboarding mein dikkat hai)

Safety filter kitni baar galat block karta hai? (safety_blocks collection dekho)

Log kahan atakte hain? Kaunsa step chhod dete hain?

Koi bypass dhoondh paya? (rules mein chhupa ke, ya spelling badal ke)

Creators fair review karte hain ya paisa bachaate hain?

PHASE 3 — Backend, Company & Legal

Maqsad: Asli paise ke liye zaroori dhaancha khada karna. Yahan pehli baar paisa kharch hoga.

3A. Backend (Cloud Functions)

Abhi sab kuch **browser mein** chalta hai — safety check, wallet, sab. Koi technical banda isse bypass kar sakta hai. Asli paise ke liye yeh chalega nahi.

FIREBASE BLAZE PLAN PE JAANA PADEGA

Cloud Functions ke liye Blaze (pay-as-you-go) chahiye — par usme bhi bada free tier hai. Tumhare scale pe **mahine ka Rs. 0-200** lagega.

Budget alert zaroor lagana — Google Cloud Console mein Rs. 500/month ka alert, taaki koi surprise bill na aaye.

Server pe kya jaayega: wallet ke saare changes, safety check, payout, agreement records, admin actions

PHASE 3A — Backend	Done
Firebase Blaze plan + budget alert	☐
Cloud Function: wallet ke saare changes (client se wallet write BAND)	☐
Cloud Function: safety check (browser se hatao)	☐
Cloud Function: mission post/approve/payout ka poora flow	☐
Firestore rules update: wallet client-write completely blocked	☐
Rate limiting (ek user kitne missions post kar sakta hai)	☐

3B. Company & Legal

PHASE 3B — Legal	Done
Vakeel se consultation (Legal Risk Checklist PDF le jaana) - Rs. 3-5k	☐
Q1 zaroor puchna: model gig marketplace hai ya online money game? Likhit opinion lo	☐
Private Limited company register karo - Rs. 8-15k	☐
Company ka bank account	☐
GST registration (agar zaroorat ho - CA se poocho)	☐
Terms/Privacy ko vakeel se review karwao	☐
Jurisdiction city clause mein daalo (company ka registered city)	☐

3C. Payments & KYC setup

PHASE 3C — Payments	Done
Razorpay account (company documents ke saath)	☐
Onboarding mein model SAAF batao: task marketplace, users stake nahi karte	☐
Razorpay Route (escrow/split) enable karwao	☐

KYC provider chuno: Digio / IDfy / Signzy (pricing compare karo)	[]
KYC flow banao: face + document, DOB match with signup age	[]
Verification levels: L0 dekho / L1 phone / L2 KYC (post + payout)	[]

PHASE 4 — Real Money Launch

Maqsad: Asli paisa chalu, par chhote amounts se aur bahut dhyan se.

SHURUAAT MEIN LIMITS LAGAO

Max bounty Rs. 100-200 shuru mein — kuch galat hua to nuksaan chhota rahe

Roz kitne missions ek user post kar sakta hai — limit lagao

Payout hold — approve hone ke 24-48 ghante baad paisa jaaye, taaki dispute ka waqt mile

Manual review pehle 50-100 payouts khud dekho, automatic mat karo

Dheere-dheere limits badhao jab bharosa ban jaaye

PHASE 4 — Launch	Done
Escrow flow end-to-end test (apne paise se, chhoti amount)	☐
Payout flow test	☐
Refund/dispute flow test	☐
Auto-approve feature (creator review na kare to)	☐
Transaction history har user ko dikhe	☐
Grievance process live aur test kiya hua	☐
TDS/GST ka hisaab CA ke saath set karo	☐
Pehle 20-30 asli transactions khud monitor karo	☐

PHASE 5 — Scale & Compliance

Maqsad: Users badhein, aur jo compliance abhi tak wait kar rahi thi woh पूरी ho.

PHASE 5 — Compliance (deadlines hain)	Done
DPDP: consent flow, data delete option, breach plan (deadline May 2027)	☐
Social Security Code: gig worker registration + fund contribution (vakeel se confirm)	☐
CERT-In: logs 180 din rakhna, breach 6 ghante mein report	☐
Copyright takedown process + repeat infringer policy	☐
Trademark: 'Misnivo' naam register karwao	☐

PHASE 5 — Growth	Done
Har mission video Instagram Reels + YouTube Shorts pe (auto-post tool)	☐
Referral system (ek user doosre ko laaye)	☐
Micro-influencers ko missions post karwao	☐
College campus outreach	☐

SEO: mission pages Google pe aayein	[]
Analytics: kahan se users aa rahe hain, kahan chhod rahe hain	[]

Tools — Kab Kya Use Karna

Kaam	Tool	Kab	Kharcha
Hosting	Cloudflare Pages	Abhi	Free
Database + Auth	Firebase (Spark)	Abhi	Free
Video storage	Cloudinary	Abhi	Free tier
AI safety check	Firebase AI Logic + Gemini Flash-Lite	Abhi	Free tier
Coding help	Claude Code + Gemini CLI (Jio plan)	Abhi	Free/Pro
Backend logic	Firebase Cloud Functions (Blaze)	Phase 3	Rs. 0-200/mo
Payments + escrow	Razorpay Route	Phase 3-4	~2% per txn
KYC (face + doc)	Digio / IDfy / Signzy	Phase 3	Rs. 15-40/KYC
Analytics	Firebase Analytics	Phase 2	Free
Error tracking	Sentry (free tier)	Phase 2	Free tier

Kharcha — Phase ke Hisaab Se

Phase	Ek baar ka kharcha	Mahine ka
1 — Secure & Complete	Rs. 0	Rs. 0
2 — Test with Users	Rs. 0	Rs. 0 (nakli bounty apni jeb se, optional)
3 — Backend & Legal	Rs. 15,000-30,000 (vakeel + company)	Rs. 0-200
4 — Real Money	Rs. 5,000-10,000 (Razorpay setup, KYC minimum)	Rs. 500-2,000
5 — Scale	Revenue se	Users ke hisaab se

Kaam Karne ka Tareeka

Claude Code ke saath

- **Ek baar mein ek chhota kaam.** Bade multi-task prompts naye bugs banate hain.
- **Effort LOW/MEDIUM** rakho — HIGH pe 15-30 minute soch mein nikal jaate hain.
- **'Ask before edits'** mode use karo.
- Har change ke baad: `node -c js/app.js` se syntax check.
- Kaam hone ke baad turant **commit and push** — Cloudflare khud deploy kar dega.
- Kuch toot jaaye to git se wapas jaa sakte ho — isliye chhote commits karo.

Kabhi mat todna (ye kaam karte rehne chahiye)

PROTECTED FUNCTIONS

acceptDare, submitProof, uploadToCloudinary, openShorts, openVideoDetail, vidThumb, guestCheck, submitDare

Agreement gates aur safety filter — ab yeh bhi protected hain

v16 mein hataye gaye features WAPAS MAT laana: dual profile tabs, follow system, ratings

Design rules

- YouTube-clone: pure black #0f0f0f, Roboto font, flat minimal
- Red #FF0033 sirf logo aur primary buttons pe
- Mobile-first — zyadatar users phone pe honge
- Comments: top-level comments collection, no orderBy

AGAR SIRF AGLE 5 KAAM DEKHNE HON

1. Firestore Security Rules likho aur lagao — sabse zaroori
2. 18+ age gate signup pe
3. Private chat hatao, public comments rakho
4. Terms + Privacy + Community Guidelines + Grievance Officer pages
5. Logo/theme finalize karke laga do

Yeh roadmap Misnivo ke liye August 2026 mein banaya gaya. Legal se judi baatein sirf general information hain, legal advice nahi — Phase 3 mein vakeel se confirm karna. Time estimates solo part-time developer ke liye hain aur badal sakte hain.
